Potential Buyers Search  
Executive Summary for Patent Lots

## Job Profile of Patent research interns

The work will mainly be related to patent research and analysis. Patent research and analysis involves reviewing/reading or skimming through thousands of patents/research papers/thesis on daily basis. The reviewing/reading/analysis of patents/non-patents is based on the certain parameters given by the Client, and accordingly developing search strategies to find the best results that meets parameters given by Client. Following are some of the works that you may be working on during your internship at iCUE RIOUS:

### Patent/Product Search

Patent/Product Search will involve looking for the infringing products that are infringing over the patents of patent owner. For instance, in a patent infringement case between Apple and Samsung, Apple found that Samsung mobiles are infringing over their design Patents. In other cases, there were some arguments over the usage of touch technology of Apple as well.

Skills Required: In-depth understanding of the technology and should have eye for details.

### Patent/Product Mapping

Patent/product mapping involves mapping the features of a product (let's say the drag/tap option in Apple mobile) with the elements of a Claim of a patent (Claim is a set of elements that combines together to form an inventive device/method as invented by an inventor).

Skills Required: In-depth understanding of the technology and creative mindset

## Job Profile of Patent research interns

### Patent Searching:

For patent searching, essentially, a researcher should be technically sound and should have good reading skills.

Patent searching requires searching for existing technologies/inventions/research papers or any other published material on internet that is disclosing the same idea that an inventor believes to be new. We assist inventors in locating such information so that he may decide if his idea is actually new or it's already existing and patented/published by some other entity. Based on requirement of Client, there might be multiple types of patent searching. The interns would mainly be working on four type of patent searching: Invalidation Searching, Novelty Searching, State of Art Search, and Clearance Search.

*Apart from the aforementioned work, the work may further be related to drafting patent Applications, automation of processes using programming languages, and others.*

## Requirements & Compensation

- ❖ iCuerious require 3-4 fresh engineers for patent research in the domain of **Electronics and Communication**.
- ❖ The candidates should have CGPA 7.5 and above with no backlog. *He must have good technical understanding of his subjects and should have strong interest in research field.*
- ❖ There will be no cab/accommodation/lunch facility provided by iCuerious.
- ❖ Timings: 9AM to 6PM
