Patent Intelligence Services

Patent Valuation
Patent Portfolio Evaluation
Patent Ranking
Patent Portfolio Management
Patent Strength Analysis

Patent Brokerage Support

Patent Marketing Packages
Patent Bucketing (Categorization)
Potential Buyers Search
Executive Summary for Patent Lots

Job Profile of Patent Analyst

The work will mainly be related to patent research and analysis (Secondary Research). Patent research and analysis involves reviewing/reading or skimming through thousands of patents/research papers/thesis on daily basis. The reviewing/reading/analysis of patents/non-patents is based on the certain parameters given by the Client, and accordingly developing search strategies to find the best results that meets parameters given by the Client. Following are some of the works that you may be working on during your Internship at iCUE RIOUS:

Patent/Product Search

Patent/Product Search will involve looking for the infringing products that are infringing over the patents of patent owner. For instance, in a patent infringement case between Apple and Samsung, Apple found that Samsung mobiles are infringing over their design Patents. In other cases, there were some arguments over the usage of touch technology of Apple as well.

Skills Required: In-depth understanding of the technology and should have eye for details.

Patent/Product Mapping

Patent/product mapping involves mapping the features of a product (let's say the drag/tap option in Apple mobile) with the elements of a Claim of a patent (Claim is a set of elements that combines together to form an inventive device/method as invented by an inventor).

Skills Required: In-depth understanding of the technology and creative mindset

Job Profile of Patent Analyst

Patent Searching:

For patent searching, essentially, a researcher should be technically sound and should have good technology/technical document reading and analysis skills.

Patent searching requires searching for existing technologies/inventions/research papers or any other published material on internet that is disclosing the same idea that an inventor believes to be new. We assist inventors in locating such information so that he may decide if his idea is actually new or it's already existing and patented/published by some other entity. Based on requirement of Client, there might be multiple types of patent searching. The interns would mainly be working on four type of patent searching: Invalidation Searching, Novelty Searching, State of Art Search, and Clearance Search.

Technology Landscape Study:

For technology landscape, essentially, a researcher should be able to understand the trends or how a specific technology evolved using the insights from patent data.

Technology Landscapes enable R&Ds to take informed and strategic decisions regarding where to invest considering the state of technology, what to license considering the state of patents assigned to competitors, and many similar insights using the patent data.

Requirements & Compensation

- ❖ iCuerious require 3-5 Patent Analysts for patent research in the domain of **ECE & Mechanical Stream**.
